

## **6. FACE DETECTION METHOD IN OPENCV USING PYTHON**

<b>EX.N0 : 6</b>	<b>LOAD AND IMPLEMENT THE FACE DETECTION METHOD IN OPENCV USING PYTHON</b>
<b><u>DATE : 04/03/2025</u></b>	

### **AIM:**

To load and implement real-time face detection using OpenCV and Haar Cascade Classifier.

### **ALGORITHM:**

Step 1: Import OpenCV library.

Step 2: Load the Haar cascade classifier for face detection.

Step 3: Access webcam video using cv2.VideoCapture ().

Step 4: Read frames continuously and convert them to grayscale.

Step 5: Detect faces using detectMultiScale() method.

Step 6: Draw rectangles around detected faces and display the video

### **PROGRAM:**

```
import cv2
face_cascade = cv2.CascadeClassifier(cv2.data.harcascades +
'haarcascade_frontalface_default.xml')
cap = cv2.VideoCapture(0)
while True:
    ret, frame = cap.read()
    if not ret:
        break
    gray = cv2.cvtColor(frame, cv2.COLOR_BGR2GRAY)
    faces = face_cascade.detectMultiScale(gray, scaleFactor=1.1, minNeighbors=5)
    for (x, y, w, h) in faces:
```

```
cv2.rectangle(frame, (x, y), (x + w, y + h), (0, 255, 0), 2)
cv2.imshow("Face Detection", frame)
if cv2.waitKey(1) & 0xFF == ord('q'):
    break
cap.release()
cv2.destroyAllWindows()
```

**OUTPUT:**

**RESULT:**

Thus the Program has been executed successfully and verified.
